

OLD DOMINION

Old Dominion Extension

Mining Development Company

Incorporated under law of Arizona,
in January, 1916.

HOME OFFICE, GLOBE, ARIZONA

CAPITALIZATION\$5,000,000
1,000,000 shares.....Par value, \$5
Treasury Stock.....774,000 shares

DIRECTORS AND OFFICERS

Joseph F. Chisholm.....President
Roy G. Thomas.....Vice President
Louis M. Greenstein..Secretary-Treasurer
Frank Gill.....Director
A. R. Malone.....Director

THE OLD DOMINION EXTENSION holdings consist of 600 acres of heavily mineralized ground adjoining and dovetailed into the ore zone of the OLD DOMINION COPPER COMPANY, one of the worlds greatest producers. The Arizona Eastern Railroad crosses both properties (OLD DOMINION and OLD DOMINION EXTENSION), paralleling Pinal Creek, which follows the great Pinal Fault.

All titles have been passed upon by Hon. W. E. Brooks, one of the leading mining lawyers of the Arizona Bar, and have been checked by the Gila County Abstract & Title Company of Globe, Arizona.

Of the total 1,000,000 shares of capital stock, 226,000 shares have been allotted the men who have spent years in preparing this valuable property for its development. This has been placed in escrow for a long period. Three hundred thousand shares authorized by the Arizona Corporation Commission are offered the investing public—the net to be used in developing the property—leaving the treasury well fortified with a balance of 474,000 shares.

IT REQUIRES no dissertation upon the possibilities of the OLD DOMINION EXTENSION nor the greatness of the OLD DOMINION to show the investing public the opportunity being presented in this mining venture. The above photographic view and the following data will suffice for the intelligent investor.

L. R. Latrobe & Company, investment brokers, New York City, have compiled statistics on the earning power of the large copper producers, from which we quote that of the

Old Dominion Copper Mining Company

Copper	14c	16c	18c	20c	22c	24r	26r
Earnings per share	\$6.56	\$8.94	\$11.32	\$13.70	\$16.08	\$18.46	\$20.84
Estimated cost of production, 8 1/2c per lb.	Output, 35,000,000 pounds yearly						

THIS WOULD GIVE RETURNS OF OVER 80 PER CENT ON THE PAR VALUE FOR THE PRESENT PRICE OF COPPER and over 20 per cent on the par when copper sells for 14c.

Mr. R. G. Thomas, E. M., a mining engineer of many years' experience in the Southwest, after careful examination of the OLD DOMINION EXTENSION, has written a report from which the following excerpts are taken:

"The OLD DOMINION EXTENSION, OLD DOMINION and Copper Hill district properties are so closely related topographically and geologically that for an intelligent understanding they must be studied and treated as a unit. They comprise a northerly-tilted block of mineral-bearing sedimentaries, the OLD DOMINION and OLD DOMINION EXTENSION covering the Southwesterly end and the Copper Hill District the higher portions. Development at the OLD DOMINION mine and Copper Hill district properties has disclosed that the mineralization occurs as replacement ore bodies along the bedding planes of the limestone, shale and quartzite; and as lodes in the diabase . . . the richest ore bodies of the OLD DOMINION are found in that block of limestone which borders and dips underneath Pinal Creek.

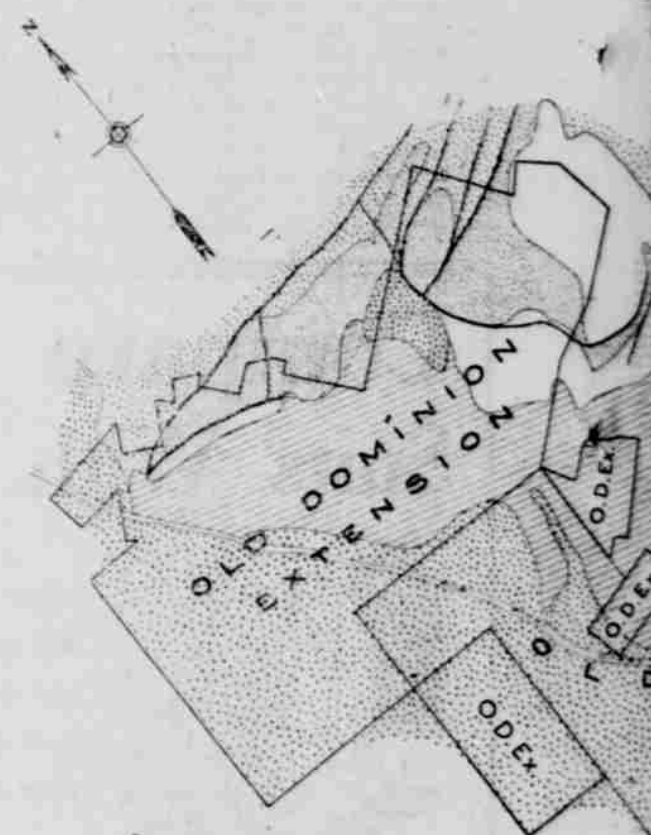

Development on the OLD DOMINION EXTENSION has been carried on in an extension of this same body of limestone farther to the West."

A graphic, but conservative comparison of the OLD DOMINION EXTENSION'S topographical, geological and mineralogical relation to the OLD DOMINION would be that of the CALUMET & ARIZONA or SHATTUCK & ARIZONA at Bisbee to the COPPER QUEEN, or the UNITED VERDE EXTENSION at Jerome to the UNITED VERDE; although none of the above properties had as extensive and rich surface mineralization as has the OLD DOMINION EXTENSION.

The great Pinal Fault, followed by Pinal Creek, at the base of the mountains in the above photograph, contains the BIRD IRON MASK, and other veins of the OLD DOMINION EXTENSION intersect the fault similar heavy mineralization

Investors should not confuse the OLD DOMINION EXTENSION with other properties bearing somewhat into the proven high-grade ore MINION. Only reliable brokerage firm for this stock.
